

8-28-99

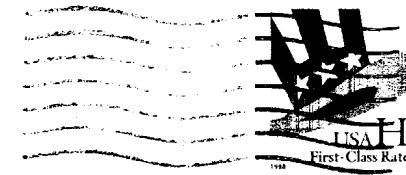

Not only because I have had cancer in the past and there are many foods that I have eliminated from my diet but because I think it is outrageous that our government would want to force feed babies, elderly and the population at large foods that may cause them severe harm. Many in my family have allergies and asthma. If one of them becomes seriously ill and dies - is our government going to care? I think not. It is of extreme importance that all genetically engineered foods are labeled so that we are able to make our own choices.
